
Foundational Concepts

1. **What is a Web Application?**
 2. **Client vs Server**
 3. **Frontend vs Backend**
 4. **How the Web Works (Request-Response cycle)**
 5. **What is an API? (REST API vs SDK)**
 6. **What is a Tech Stack?**
 7. **How is a Single Page Application (SPA) different from traditional apps?**
 8. **What is HTTPS and how does it protect data?**
 9. **What is hosting and how does deployment work?**
-

Technologies Used (Project-Specific)

Frontend

10. **React.js – Components, JSX, Props, State, Lifecycle**
11. **React Router – How navigation works in SPA**
12. **Tailwind CSS – Utility-first styling, responsiveness**
13. **Vite – Fast bundler for React projects**

Backend (Serverless)

14. **Firebase Overview – What it is and what services it offers**
 15. **Firestore (NoSQL) – Data structure, collections, documents**
 16. **Firebase Authentication – How secure login works**
 17. **Firebase Storage – Uploading and accessing images/files securely**
 18. **Firebase Rules – Security and access control at the backend**
-

Architecture & Data Flow

19. **Project folder structure (React + Firebase)**
20. **Component hierarchy and page routing**
21. **Data flow in the app (Frontend <-> Firestore)**
22. **Role-based access control (user vs owner)**

- 23. **How chat is implemented (subcollections, message sync)**
 - 24. **How filters/search query PGs from Firestore**
-

Security Concepts

- 25. **Authentication vs Authorization**
 - 26. **Role-based restrictions (both in UI and backend rules)**
 - 27. **HTTPS, SSL, and encryption basics**
 - 28. **Why frontend validation is not enough (need for rules in Firebase)**
 - 29. **Secure login flows (Google & Email/Password)**
-

Hosting & Deployment

- 30. **What is Vercel? – Hosting and auto-deployment**
 - 31. **How Firebase Hosting works (if used)**
 - 32. **CI/CD – What it means and how GitHub + Vercel handle it**
 - 33. **Difference between local development and production deployment**
-

Design, UX & UI

- 34. **What is responsive design?**
 - 35. **How Tailwind makes design faster and cleaner**
 - 36. **What is mobile-first design?**
 - 37. **How accessibility (a11y) could be improved**
-

Project-Level Thinking

- 38. **Why serverless? Pros and cons**
 - 39. **What are the scalability limits of Firebase?**
 - 40. **How will the app behave with 1000+ users?**
 - 41. **How future features like maps, payments, notifications can be integrated?**
-
