

Excellent — the **Live Demo / Walkthrough** is one of the most important and scoring parts of your presentation. If done smoothly, it **proves your system works**, shows **practical understanding**, and builds **trust** with the examiner.

Here's a complete **plan and walkthrough script** for your live demo — covering both **user** and **owner** flows as you structured in your slides.

---

# MessFinder – Live Demo Script & Guide

---

*Duration: ~10 minutes / Purpose: Show the working product end-to-end*

---

## BEFORE YOU START:

- Ensure internet is working
  - Open site: <https://mess-finder.vercel.app>
  - Open Firebase console (if needed, in case someone asks to prove data is saved)
  - Login with 2 separate test accounts:
    - **User Account:** `testuser@gmail.com` / `123456`
    - **Owner Account:** `pgowner1@gmail.com` / `123456`*(or your chosen demo accounts — make sure they are registered)*
- 

## DEMO FLOW OUTLINE

**Part A – From the perspective of a USER**

**Part B – From the perspective of an OWNER**

---

## Part A: User Flow (Room Seeker)

### 1. Home Page & Search

Script:

"We start at the MessFinder homepage. Suppose I am a student searching for a PG in Bankura. I type the location here and click search."

Action: Enter location (e.g., "Bankura") → Click Search

Result: It shows PGs matching the location

---

## 2. Filter & View Details

Script:

"We can apply filters like gender-based PGs, mess type, and price. Let's open one PG listing."

Action: Apply filters → Click on a PG card

Result: Shows images, rent, mess info, and contact options

---

## 3. Try to Chat (without login)

Script:

"If I want to message the owner, the system asks me to log in first for security reasons."

Action: Click 'Chat' or 'Contact' → Redirects to login

---

## 4. Login as User

Script:

"I'll now log in using a test user account."

Action: Login with email/Google

Result: Redirected back to dashboard or previous screen

---

## 5. Chat With Owner

Script:

"Now I can chat directly with the owner — just like a messaging app."

Action: Click 'Chat' again → Type message

Result: Chat is stored and synced live

---

## 6. Save Room (if implemented)

Script:

"I can also save rooms to my dashboard for future reference."

Action: Click 'Save' or 'Bookmark' (if available)

---

## Part B: Owner Flow

### 1. Register/Login as Owner

Script:

"Now let's switch to the PG Owner side. I'll log in using an owner account."

Action: Logout as user → Login/Register with owner account

Result: Owner dashboard opens

---

### 2. Update Profile

Script:

"Owners can update their profile with name, mobile, and other details."

Action: Go to Edit Profile → Enter info → Save

---

### 3. Submit a PG

Script:

"Now let's list a new PG. The owner can upload images, enter rent, mess details, and location."

Action: Click 'Submit PG' → Fill form → Upload images → Submit

Result: PG appears in search results instantly

---

### 4. View Listings or Messages

Script:

“The owner can also view their listed PGs, check who messaged them, and reply directly.”

Action: Open Messages or My PG Listings section

---

## 5. Logout

Script:

“Once done, the owner can log out securely.”

Action: Click Logout

---

## Optional: Firebase Console Peek

“All data — including PGs, users, and chat — is stored in Firebase. We used Firestore as the database, Firebase Auth for login, and Firebase Storage for images.”

Action: Show Firebase Console (firestore collections, storage, auth)

---

## END DEMO

Final Script:

“This completes the full walkthrough of our system — from searching a PG as a student to listing one as an owner. We’ve made the app lightweight, fast, and easy to use. Now we’ll move into the Q&A session.”

---

## Tips for a Smooth Demo:

| Do                                       | Avoid                                  |
|------------------------------------------|----------------------------------------|
| Practice with test accounts              | Forgetting password / loading failures |
| Narrate steps as you do them             | Just clicking without speaking         |
| Show key features (search, submit, chat) | Showing code or unrelated pages        |
| Have backup screenshots (if net fails)   | Stopping in the middle                 |

---
