

Excellent decision! Viva questions often vary depending on the **examiner's interest**, your **college level (tier 2–3)**, and the **depth of your own confidence**.

Here's a **categorized list of likely viva questions** with:

- **Question type** (What / Why / How / Which / Etc.)
- **Category** (Technical, Non-Technical, Academic, Easy, Hard)
- **Bonus: How to answer tip**

VIVA QUESTION BANK (Categorized)

A. Easy & Non-Technical Questions (Warm-up / General)

Question	Type	Category	How to Answer
What is the name of your project?	What	Easy / Non-Tech	"MessFinder – a room and PG finding platform."
Why did you choose this topic?	Why	Easy / Non-Tech	"We faced this problem ourselves, and saw how unorganized the current system is."
Who are the users of this system?	Who	Easy	"Students, job seekers, and PG owners."
Which tools or platforms did you use?	Which	Easy	"React for frontend, Firebase for backend."
What was your role in the team?	What	Easy	Be honest – design, backend, documentation, etc.
Is this project live or working?	What	Easy	"Yes, it's hosted at mess-finder.vercel.app"

B. Technical – Moderate Level

Question	Type	Category	How to Answer
How does your authentication system work?	How	Technical	"Firebase Authentication handles login, storing hashed credentials."
What is Firebase Firestore and why did you choose it?	What / Why	Tech	"It's a real-time NoSQL database that's easy to use and scalable."
How are user roles managed?	How	Tech	"Each user has a role field in the database: 'user' or 'owner', used for access control."

Question	Type	Category	How to Answer
How is chat implemented?	How	Tech	"Using Firestore collections with user-to-user messages; real-time sync."
Why React over plain HTML/CSS or PHP?	Why	Technical	"Because React is component-based, scalable, and faster for modern apps."
How is your site hosted?	How	Tech	"Frontend is hosted on Vercel, Firebase handles backend/database."

C. Hard or Advanced Technical Questions

Question	Type	Category	How to Answer
How would you scale this system if 1 lakh users use it?	How	Hard / Tech	"Firestore scales easily. We would also add pagination, lazy loading, and caching."
How is data security ensured for users?	How	Hard / Security	"HTTPS, Firebase Auth, role-based access, hashed passwords, and secure rules."
Can users access unauthorized data?	What	Hard	"No. Firestore rules prevent cross-user access."
What are the limitations of Firebase?	What	Hard	"Limited queries, pricing after quota, not ideal for complex joins."
How would you implement payment gateway in future?	How	Hard	"By integrating Razorpay or Stripe with Firebase Functions for secure backend logic."

D. Academic Questions (Theory/Expected Knowledge)

Question	Type	Category	How to Answer
What is SDLC? Which model did you follow?	What / Which	Academic	"Software Development Life Cycle – we followed a simple Agile/incremental model."
What is a Feasibility Study?	What	Academic	"It assesses whether a project is technically, financially, and legally viable."
What are functional and non-functional requirements?	What	Academic	"Functional = app behavior (e.g., search PG); Non-functional = performance, security."
What is responsive design?	What	Academic	"It means the site adapts to all screen sizes using flexible layouts."
Difference between Firebase and SQL database?	What	Academic	"Firestore is NoSQL and schema-less; SQL is structured with tables and joins."

E. Project-Process Questions (What/Why/How)

Question	Type	Category	How to Answer
What difficulties did your team face?	What	Process	"Testing multiple user flows, image upload, chat logic, and database structuring."
How did you collaborate as a team?	How	Process	"Each member had a role, and we shared code/docs via GitHub & Google Docs."
Which part was most challenging?	Which	Process	Be honest – e.g., real-time chat, Firebase rules, UI logic
Why should someone use your app?	Why	Process / UX	"It's simple, fast, verified, and removes spam from PG searches."
What future improvements will you add?	What	Planning	"Payment gateway, Google Maps, ratings, notifications, admin panel."

Final Tips

- Be confident and clear – it's okay to say **"We didn't implement that, but we researched it."**
- Back your answers with your **code or demo** if needed.
- Smile. Stay calm. Use simple terms even for hard answers.
