

Perfect! Here's what I'll prepare for you in **two parts**:

📄 Part 1: Presentation Rehearsal Sheet

(Short bullet notes for each speaker — perfect for practice or print)

📄 Part 2: 1-Page Viva Prep Handout

(Quick Q&A-style page for team revision and final day readiness)

Let's start with **Part 1: Presentation Rehearsal Sheet**📄

📄 Presentation Rehearsal Sheet (MessFinder)

🕒 Total Duration: ~45 mins | 11 Topics | Each member speaks 2–4 mins

📄 1. Introduction – Sujoy

- What is MessFinder?
 - Who is it for? (students, job seekers)
 - Why did we build it? Rising PG demand, unorganized info
 - Highlight: One platform to search, contact, and list PGs
-

📄 2. Problem Statement – Priti

- Difficult to find rooms (Facebook, posters, word-of-mouth)
 - No verified sources, scams are common
 - Unorganized info = waste of time
 - Users lack trust + time
-

📄 3. Goals – Reshmi

- Connect seekers and owners
 - Simple, clean platform
 - Support local room economy
 - Encourage verified rentals
-

📄 4. Social Impact – Souvik

- Helps students and professionals find safe rooms
 - Helps PG owners get visibility and income
 - Encourages digital inclusion, even in small towns
-

📄 5. Features – Moumita

- Room search with filters
 - Submit PG with images, details
 - Real-time chat with owner
 - Save favorite PGs, secure login
-

📄 6. Feasibility – Subhadip

- Can be used on any phone
 - Built with simple tools (React, Firebase)
 - Free to host, fast to update
 - Suitable for small and large areas
-

7. How It's Built – Puja

- 6-Step Process:
 1. Requirement gathering
 2. System analysis
 3. Designing & coding
 4. Testing and bug fixing
 5. Deployment on Vercel
 6. Maintenance
 - Agile and modular approach
-

8. Tech Stack – Susanta

- React.js – UI
 - Firebase – Auth, DB, Hosting
 - Tailwind CSS – Design
 - Real-time chat with Firestore
 - HTTPS + secure tokens for auth
-

9. User Role & Flow – Aakash

- User: Search > View > Contact > Save Room
 - Owner: Register > Post Room > Chat
 - Login with Google/email
 - Separate dashboards for user & owner
-

10. Security – Susanta

- Role-based access control
 - Hashing passwords (Firebase)
 - HTTPS & SSL encryption
 - Secure chat and login flow
-

11. Future Plans – Sujoy

- Add payment gateway
 - Map-based search
 - User ratings & review system
 - Push notifications
 - Accessibility options
-

Would you like this as a downloadable **PDF** when tools are back? Now, let's move on to:

Part 2: Viva Prep – Quick Q&A Sheet

MessFinder – 1-Page Viva Prep

Question	Suggested Answer
What is MessFinder?	A web app to find and list PGs/rooms for students and professionals.
Why did you build it?	Growing demand, unorganized rental systems, and lack of trust in current sources.
What tech stack did you use?	React, Firebase (Auth, Firestore, Hosting), Tailwind CSS.
How does the search work?	Users search by location/keyword, results are filtered in real-time from database.
How is security handled?	Firebase Auth, hashed passwords, SSL encryption, role-based access.
How is it different from OLX or Facebook	

posts? ❏ Question	Verified listings, chat with owner, secure access, no spam. ❏ Suggested Answer
Who are the target users?	Students, job seekers, PG owners in local/semi-urban areas.
What are future features?	Payment, map view, reviews, push notifications, accessibility.
Is it scalable?	Yes. Firebase backend and React frontend make it lightweight and scalable.
How did you test it?	Manually across devices, using test users and test data.
Hosting platform?	Vercel for frontend, Firebase for backend.
