

Here's the final presentation script for the last speaker:

Speaker 11: Sujoy (again)

Topic: Future Plans – What's next for MessFinder?

Script (Presentation Story)

Thank you, Susanta.

To conclude our presentation, I'll now talk about the **Future Plans** we have for MessFinder.

Although the current version is fully functional and meets the basic needs, we believe there's always room to grow and improve – especially when real users start using the system.

So here are the major features we plan to add in the future.

Map-based Search

Currently, users search by entering a location name. But in the future, we want to add **Google Maps integration**, so that users can:

- See PGs near their area
- Filter based on distance
- Get directions instantly

This will give a **more visual and interactive experience**.

Online Payments and Booking

In the current version, users and owners talk and fix the deal offline.

In future, we plan to integrate **Razorpay or Stripe** to allow:

- Advance booking
- Security deposits
- Rent payments (optional)

This will build **trust and convenience** on both sides.

Push Notifications

We want to add **browser notifications** for:

- New messages
- Booking status
- New room listings

This keeps users **engaged and updated** without checking manually.

Review and Rating System

To improve transparency, we'll let users:

- Leave reviews after staying in a PG
- Rate owners and room quality

This encourages better service and **builds a community of trust**.

Accessibility & Admin Tools

We also plan to:

- Improve support for visually challenged users
 - Add an **admin dashboard** to review reported listings
 - Detect and remove spam or offensive content
-

Summary:

MessFinder has the potential to become a **complete platform for rental discovery** – and with these future upgrades, we hope to make it even more powerful, safe, and useful.

That brings us to the end of our presentation.

On behalf of our entire team, I would like to thank you for your time and attention.

We're now open to any questions or feedback you may have.

Tips for Sujoy (Final Part):

- Speak like you're showing the app's future – be visionary
 - Use "we plan to...", "we aim to..." – shows growth
 - Smile and show excitement for what's coming next
 - End with strong, polite tone: "Thank you... we're open to questions."
-

Likely Viva/Panel Questions for Sujoy (Future Plans):

Q: What challenges will you face in adding payments?

A: We'll have to ensure secure payment gateway integration, backend verification, and refund policies – we plan to use Razorpay or similar with Firebase Functions.

Q: Can maps and notifications work without mobile apps?

A: Yes. Google Maps and web push notifications can be integrated in browser-based apps using service workers.

Q: How will you manage fake reviews?

A: Only verified users will be allowed to leave reviews after staying, and admins will be able to moderate flagged reviews.
