

Awesome! Here's the next detailed script for:

---

## Speaker 5: Moumita

### Topic: Main Features – What does MessFinder offer?

---

#### Script (Presentation Story)

Thank you, Souvik.

Now let's talk about the **main features** that make MessFinder a complete and user-friendly platform for finding and listing rooms.

We designed each feature based on the **real-life needs** of students, renters, and PG owners. Let me explain them one by one.

---

#### Search and Filter PGs

Users can search for rooms based on location, name, or keyword. The system fetches results from our Firebase database and displays them instantly.

We've also added **filters**, like:

- Type of PG (boys/girls/co-ed)
- Mess type (veg/non-veg)
- Price range

This helps users **find exactly what they're looking for – quickly and easily**.

---

#### Owners can list PGs with full details

We created a special **Submit Page** where verified owners can:

- Enter room description, price, facilities
- Upload images
- Add mess info and gender-based suitability

This allows each PG listing to have full transparency, so that seekers can decide before contacting.

---

# Real-time Chat System

If a user is interested in a PG, they can **send a message directly to the owner**. The chat is powered by Firestore, which syncs data in real time.

Owners can reply and fix a visit time or clarify doubts — just like WhatsApp, but inside the app.

This builds **direct communication** and removes the awkwardness of calling strangers.

---

## Login and Save Rooms

Users can log in with email or Google using Firebase Auth. Once logged in, they can:

- Save PGs to favorites
- Access chat
- View their profile and settings

This makes the experience **personalized and secure**.

---

These are just the core features — everything is responsive, mobile-friendly, and works with real-time data. We focused on **simplicity, speed, and clarity**.

Now, I invite **Subhadip** to explain whether this system is **feasible** in real-world use or not.

---

## Tips for Moumita:

- Explain features like you're demonstrating them — visualize the actions
  - Speak clearly during lists (filters, facilities)
  - Use words like "helps", "easy", "transparent" — user-focused language
  - End smoothly: "Now, I invite Subhadip..."
- 

## Likely Viva/Panel Questions for Moumita:

### Q: Can any user post a PG?

A: No, only logged-in users with role "owner" can see the submission page and post a room.

### Q: How does chat work?

A: Chat is stored in Firestore using message collections. Messages are synced in real time between user and owner.

**Q: What if someone posts fake info?**

A: In future updates, we plan to add a reporting feature and admin moderation.
